

NEW JERSEY ENTERTAINMENT NETWORK

Developer Master Business Rules

Production Build / 4-Week Public Launch
Prepared for Viral • September 14, 2026 • Version 1.0

Purpose. This document is the operating source of truth for the NJEN build. It converts the approved business model and the 4-week launch roadmap into concrete product, access, content, workflow and delivery rules. If a requested implementation conflicts with this document, stop and obtain Raphael's approval before changing the rule.

1. Non-Negotiable Product Definition

Positioning: NJEN is “New Jersey’s Entertainment Headquarters”: a statewide entertainment infrastructure, resource and community platform.

Not just jobs: Jobs and opportunities are an important traffic and engagement driver, but NJEN also covers education, internships, career pathways, production activity, children/parents, social-media safety, industry resources, events/community and practical resources.

Not a talent agency: NJEN is separate from Media Artists Group (MAG). NJEN must not represent actors, negotiate principal acting employment, procure principal acting work, or architect MAG business logic into NJEN.

Not a producer/promoter: NJEN is an information/resource infrastructure platform and should not imply that it produces the films, television programs, theatrical productions or events it reports on.

Not a public people-search site: The complete Background Performer Directory and protected production-facing directories are never public.

2. Permanent Audience and Data Separation

Audience	Allowed	Not Automatically Allowed
Public visitor	Public resources; Jobs/Career Hub; What’s Filming/Studio Watch; education; events; Children & Parents; Social Media Safety; membership information; approved public articles.	Private member records; performer directory; protected industry search; admin data.
Member / performer	Own account, entitlements and own performer profile when that program launches.	Browsing full performer directory; editing another person’s profile; industry-only data.
Verified industry user	Only the protected tools/directories granted to the verified role.	Admin/billing data or unrelated protected areas.
Provider	Own approved service/provider listing when that program launches.	Protected directory-wide access unless separately verified/authorized.
NJEN staff/admin	Moderation, publishing, verification, role/content/listing management according to assigned role.	Unlimited access by default. Least privilege and auditability still apply.

Engineering rule: Protected data must be enforced at the server/API/database layer. Hiding a button, route or page in the frontend is never an acceptable security boundary.

3. Four-Week Public Launch: Exact Boundary

IN for launch

- Production-ready public homepage, navigation, footer and responsive/mobile-first design.
- Jobs/Career Hub with real database-driven listings, search/filter basics, detail pages, moderation and expiration/closed states.
- What's Filming / Studio Watch public information area.
- Career Center / Career Launch content and Internship Exchange content structure.
- Resources/Education, Children & Parents, Social Media Safety / Creator Center, Events/Community and Membership information.
- Contact, newsletter/waitlist and approved submission forms with validation, spam protection and rate limiting.
- CMS/Admin for authorized staff to create, edit, draft/review, publish, feature, schedule, expire and archive appropriate content.
- SEO fundamentals, analytics as approved, accessibility work, security headers, logging/monitoring, backups/restore readiness and staging/production deployment.
- Shortcuts to Hollywood architecture and controlled delivery approach; no publicly exposed digital file.

OUT of the 4-week launch

- Full Background Performer registration/profile program.
- Public or protected searchable Background Performer Directory.
- Verified Industry/Production Portal.
- Advanced member accounts, saved jobs, alerts and personalization.
- Crew/Crafts and Production Services/Catering protected directories.
- Complex referral/commission automation.
- Employer applicant tracking, on-platform job applications and resume storage.
- Member Success Coach™ and advanced AI/personalization.

4. Jobs / Career Hub Rules

Purpose: Verified, actionable entertainment-related work, casting information where appropriate, studio jobs, internships, union and non-union pathways, and specialty production roles.

Launch publishing model: NJEN staff/admin-curated listings plus a moderated submission form. Nothing submitted by the public or an employer publishes automatically.

Verified production companies: May submit appropriate job opportunities without a listing fee, subject to NJEN moderation and rules.

Application flow: Launch version should primarily direct users to the legitimate employer/production application method. Do not build an NJEN applicant-tracking system in the four-week launch.

Expiration: Every job record must support an expiration/closed state. The CMS must allow staff to expire/archive listings manually; automatic expiration should be supported where an end date is known.

Safety: No listing should be presented as verified merely because it was submitted. Source and legitimacy should be reviewed before publication.

Compensation: Schema should support compensation/pay-range fields, but any mandatory-display rule remains subject to final legal/business confirmation.

5. What's Filming / Studio Watch

- Public-facing informational section covering New Jersey production/studio activity.
- NJEN must not imply it represents, produces, finances or is officially affiliated with a project merely because it reports on it.
- CMS records should support title, type, location/region, status, source, source date, last-reviewed date, public notes and publish/unpublish controls.
- Do not publish sensitive production information, private addresses, confidential call-sheet information or unverified rumors.
- Launch editorial ownership: NJEN staff will approve entries. Viral should build the workflow; NJEN supplies/approves the actual editorial data.

6. Membership

- The launch site must explain membership and support acquisition/waitlist/newsletter as approved, but the four-week public launch does not require full paid member-account functionality.
- Architecture must not hard-code one membership price or one permanent plan. Plans, entitlements, renewals and benefits must be configurable later.
- Shortcuts to Hollywood is intended to be an NJEN member benefit and may also have a separate non-member purchase path.
- Exact membership tier names, price, billing interval, cancellation/refund rules and launch date remain OWNER DECISIONS and must not be invented by development.

7. Background Performer Program — Post-Launch, Architect Now

- A paying background-performer participant manages only their own profile.
- The complete performer database is not public and is not browseable by performers.
- The working profile concept includes two photos; optional additional photos may be paid. The previously discussed extra-photo concept is \$20 per additional photo, but Viral must treat pricing as configurable rather than hard-coded.
- Profile data, photos, verification/moderation state, consent, account identity and billing state must be separated in the data model.
- Parent/guardian support must be designed for minors before minor profiles are activated.
- Exact base registration/membership price, searchable performer fields, minimum-age policy, guardian workflow and retention/deletion rules remain OWNER/LEGAL DECISIONS.

8. Verified Industry / Production Portal — Post-Launch, Architect Now

- Protected portal for approved production companies, studios, streamers, producers, production managers, casting personnel and other approved industry users.
- Industry access is verified and role-based; it is not granted merely by creating an account.
- Verified users may search only the protected data appropriate to their role and entitlement.
- Verification needs a lifecycle: application, review, approval, possible re-review/expiration, suspension/revocation and audit history.
- Direct performer contact information should not be exposed by default. Architecture should support a privacy-aware contact/request workflow while the final contact rule is confirmed.
- Admin privileges are separate from industry privileges.

9. Production Crew, Services, Catering and Partners

- Crew/Crafts must support both union and non-union categories.

- Production Services will include approved providers; catering is an important initial category.
- Providers should eventually be able to maintain their own approved listing/profile, subject to moderation.
- The complete industry-facing directory does not need to be public.
- Catering may use a referral/commission model; the working business concept is a 10% referral commission from participating caterers. Do not automate commission accounting until final rules are approved.
- Education/internship partners and related partner workflows belong in the post-launch roadmap.

10. Children & Parents Resource Center

- Public educational center for New Jersey child-performer rules, permits, practical guidance, representation resources and parent/grandparent education.
- Future programming includes parent/grandparent seminars with appropriate industry participants.
- Do not collect unnecessary data from minors during the public launch.
- Any future minor account/profile workflow requires finalized age, guardian consent, privacy, retention and deletion rules before activation.

11. Social Media Safety / Creator Center

- Permanent, public, safety-first center for children, teens, parents and grandparents.
- Primary emphasis is safety — not monetization or influencer income.
- Content areas include privacy/account settings, location/geotagging, DMs and stranger contact, grooming/predatory behavior awareness, scams/fake casting or brand opportunities, impersonation, inappropriate requests/content, reporting/blocking and parental controls.
- Structure content so NJEN staff can continually add/update tutorials and safety resources without developer intervention.

12. Events & Community

- Public events/community content is part of launch.
- Long-term NJEN community programming includes entertainment-industry singles mixers approximately 3–4 times per year, additional non-singles mixers, and educational seminars.
- The working business rule is that NJEN Singles Mixers are free to members.
- Launch CMS should support event title, category, date/time, location/region, description, link/registration information, featured state, publish state and expiration/archive.

13. Shortcuts to Hollywood

- Keep the feature in the architecture from the initial build.
- Treat the book as an approved NJEN member benefit.
- Support a future separate purchase path for non-members.
- Never put the downloadable digital book at a public/static URL that can be freely shared or indexed.
- Use protected/controlled delivery and entitlement checks.
- Final payment provider, non-member price, member entitlement rules, download/view limits and delivery method remain OWNER DECISIONS.

14. CMS / Admin Rules

- Routine NJEN operation must not require Viral or anyone else to edit the database directly.
- Initial staff roles should at minimum distinguish Admin from Editor/Moderator capabilities.

- CMS should support draft/review/publish, featured content, scheduling where practical, expiration/archive, taxonomy/categories, media management and audit history.
- No shared admin accounts. Privileged accounts require stronger authentication; MFA should be used for administrators.
- All consequential moderation/verification/role changes should be auditable.

15. Technical and Ownership Requirements

- Preserve Next.js + React + TypeScript as the existing foundation where technically sound; refactor or rebuild weak prototype code rather than rebuilding everything from zero.
- Viral should recommend the remaining production stack (database, auth, CMS/Admin approach, hosting, storage, transactional email/newsletter, monitoring and payments) based on security, maintainability, scalability, cost and fit — not merely because a tool already appears in the repository.
- Use separate development, staging and production environments with reproducible deployment.
- All source code, repositories, domain/DNS, hosting, databases, storage, email, analytics, monitoring, payment systems and recovery credentials must be NJEN-owned or fully recoverable by NJEN.
- No secrets in source code, screenshots or browser/client bundles.
- Backups must include a documented restore procedure; a backup that has never been tested for restoration is not sufficient.
- Protected data access must be authorization-filtered server-side and paginated; never send the complete protected dataset to the browser and hide rows client-side.
- The codebase must be documented, maintainable and transferable to another qualified developer.

16. Content and Artwork Delivery Plan

When	Raphael/NJEN supplies	Viral does	Acceptance
Before / Day 1	Final logo/brand assets available now; social links; domain/hosting/repo/service access; approved sitemap/business rules; inventory of photos/artwork.	Confirm exact asset formats/dimensions; create staging; identify missing access; publish a single blocker/checklist.	No unknown access blocker; staging/repo workflow works.
Week 1	Homepage/About copy first; section copy in batches; real approved photos/artwork as available; brand decisions.	Build/refactor navigation, public structure, design system and CMS model. Use labeled placeholders only where final assets are pending.	Working mobile-first public structure on staging.
Week 2	Initial verified jobs, What's Filming entries, events/resources and remaining launch content.	Connect real content/data; implement moderation, expiry and Admin/CMS workflows.	Raphael can add/edit/publish content without developer/database work.
Week 3	Corrections only; final legal copy when available; final missing imagery.	Forms, security, auth/permissions, SEO, accessibility, monitoring, backups and full QA.	Functionally complete staging build; no major content gaps.
Week 4	Final factual/link proofing; launch approval.	Fix blockers/regressions, mobile/browser QA, performance/security checks, deploy and smoke-test.	Live, tested production site.

17. Asset Standards for Viral to Confirm on Day 1

- Provide one written asset checklist with preferred logo format, photo format, minimum pixel dimensions, aspect ratios/crops for hero/cards, maximum file sizes and file-naming convention.
- Preserve original high-resolution files; generate optimized web derivatives rather than destructively resizing originals.
- Use real photography for NJEN public-facing imagery. Do not substitute AI caricatures or synthetic people for approved real photographs.
- Every asset must have known usage rights/permission. CMS should support alt text for meaningful images.
- Where an approved final image is not ready, use a clearly labeled temporary placeholder rather than blocking development.

18. Weekly Working Protocol

- Viral sends one consolidated 'Need From Raphael' checklist at the beginning of each week and updates it as blockers arise.
- Blockers that could threaten the 4-week date are raised immediately, not saved for the weekly report.
- End-of-week demonstrations are working staging demonstrations, not screenshots.
- Week 4 is protected from non-critical feature additions.
- Any new idea that changes scope goes to a post-launch backlog unless Raphael explicitly declares it launch-critical.
- When a business rule is unknown, Viral marks it OPEN and asks; he does not invent the rule in code.

19. Open Decision Register — Do Not Guess

Area	Decision still required	Owner
Membership	Tier name(s), exact price/billing interval, cancellation/refund rules, date paid accounts activate.	Raphael
Background Performer	Base registration/membership price; final profile fields; searchable fields; verification rules.	Raphael + legal/privacy review where needed
Minors	Minimum age, parent/guardian account mechanics, consent, retention/deletion/export rules.	Raphael + legal/privacy review
Industry verification	Required proof/criteria, renewal/re-review period, exact approved roles.	Raphael
Industry contact	Whether verified users ever see direct performer contact details vs controlled contact/request only.	Raphael
Jobs	Final moderation SOP; whether pay ranges are mandatory; default expiration when no closing date exists.	Raphael + legal review where needed
What's Filming	Final approved source list, publication rights/sensitivity rules and staff update owner.	Raphael
Email/newsletter	Final provider.	Raphael/Viral recommendation
Payments	Final processor and purchase/refund rules for membership/book/background program.	Raphael/Viral recommendation
Shortcuts to Hollywood	Non-member price, delivery entitlement, download/view rules.	Raphael

Legal pages	Privacy, Terms, Accessibility, consent/disclaimer language.	Raphael/legal
Admin staffing	Named initial admins/editors/moderators and whether any content requires two-person approval.	Raphael

20. Acceptance Rules for the 4-Week Launch

- A real public production site is live on the approved NJEN domain.
- Core pages and navigation work on current mobile and desktop browsers, with priority on iPhone/mobile usability.
- Jobs, content, events and What's Filming use real data/content structures rather than hard-coded demo text.
- Authorized staff can manage launch content through CMS/Admin.
- Forms validate server-side and include reasonable bot/spam/rate-limit protection.
- No known launch-blocking authorization/security issue remains.
- Monitoring/error reporting is active; backups and restore procedure are documented and verified.
- No public URL exposes Shortcuts to Hollywood or protected performer/industry data.
- Broken/dead placeholder links and inert demo controls are removed or intentionally disabled/labeled.
- Production deployment is documented and NJEN retains ownership/recovery access.

21. Developer Response Requested Before Coding Starts

Viral, please reply with: (1) your recommended complete production stack; (2) any conflicts you see between this document and the current repository; (3) your Day-1 access/content/asset checklist; (4) your proposed database/role model at a high level; (5) the staging URL/workflow; and (6) any item you believe threatens the four-week launch date.

Change-control rule: This is Version 1.0. Changes should be recorded as explicit decisions rather than silently changing behavior in code.
